

Providence Health Care

The New St. Paul's Hospital

On the Jim Pattison Medical Campus

New campus at-a-glance

Our **NEW** campus

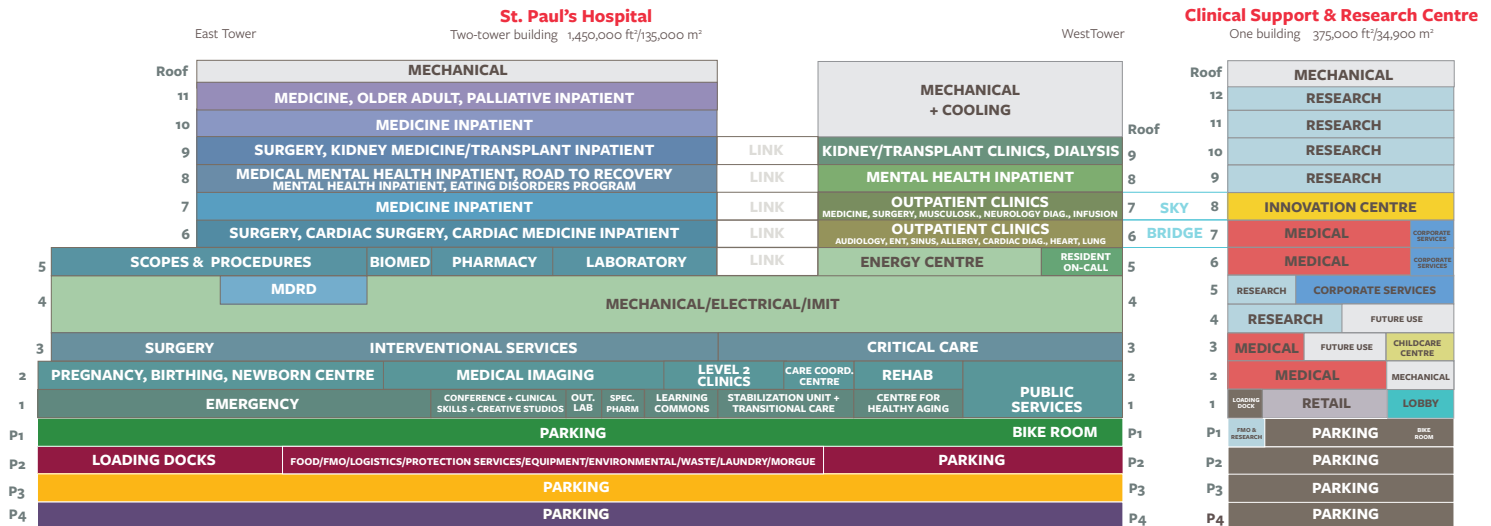

- The **NEW** campus is located near Station Street, next to the Pacific Central Train Station, near Main Street and Terminal Avenue and just three kilometres from its current location, while still conveniently on the edge of downtown.
- The **BIGGER** 18.4-acre site is known as the **Jim Pattison Medical Campus** and is almost triple the size of the 6.6-acre Burrard Street site.
- It serves as a catalyst and epicentre for a **NEW** health and digital innovation district developing in Vancouver's False Creek Flats area.
- A **NEW** central plaza and **NEW** 800-metre wellness walk will enhance the neighbourhood and reflect the site's rich cultural history and historic shorelines.
- **NEW** landscaping will restore the land and tree canopy and include drought-tolerant endemic and medicinal plants to encourage birds and pollinators, plus about 200 **NEW** shade trees.
- It's just a **CONVENIENT** four minute walk to the SkyTrain station at Main Street/Science World.
- It has **MORE** underground parking stalls, about 1,170 including 100+ charging stations for electric vehicles.

Our **NEW** hospital (Opens in 2027)

- The hospital is designed to transform how care is delivered, to help patients more easily navigate services and access the care they need, to optimize the people experience, to fill gaps in care, to improve collaboration, coordination, quality, safety, and efficiency and to provide culturally safe and appropriate care.
- It integrates **NEW** and **ADVANCED** technologies to help transform care — for the people who receive care and for those who provide it.
- It has **MORE** inpatient beds, with capacity for 548 in all, and **100%** are single-patient rooms to improve privacy and infection control. Most rooms include comfy furniture for a family member to stay at the bedside overnight to provide support.
- There are two towers — an 11-storey east tower and 9-storey west tower, connected to each other from the parkade all the way to the 9th floor.
- It's designed to be pandemic-ready (**NEW**) with over 100 isolation rooms and 15 outbreak control zones to contain airborne germs.
- The hospital is designed for resiliency (**NEW**) — to withstand earthquakes, global warming, and floods and to operate as a post-disaster facility able to serve our community for 72 hours off the power grid.
- The hospital is built to be LEED-certified (**NEW**), an internationally recognized 'green building' standard.

What's going where on the campus

Concept layout as of Jun. 12, 2025. Does not represent exact space proportions or adjacencies. Subject to change, especially the names of various areas.
 Public Services include spaces for the chapel, food venue, lobby, All Nations Sacred Space, gift shop, volunteer resources, cashier, patient care quality, release of information, and St. Paul's Foundation.
 Quoted area footage does not include spaces for parking or mechanical.

Our **NEW** CSRC (Opens in 2029) (Clinical Support and Research Centre)

- This **STATE-OF-THE-ART** research and medical complex for discovery, research and innovation will ensure we continue to be at the forefront of medical breakthroughs which have global impact, plus forge ahead into new growing frontiers of medical science such as bioengineering, nanotechnology, virtual reality, augmented reality and simulation.
- The CSRC includes scientific dry and wet labs, specialty medical practices, specimen bio-banks, analytic data centres, a **NEW** childcare centre, and Providence Health Care's corporate offices.
- At the building's core, a **NEW** Innovation Centre will bring Providence Health Care staff, medical staff researchers and corporate resources together to inspire, share, prototype ideas, and bring preventions, treatments and cures from the lab to the bedside and even to the marketplace.
- The CSRC extends the continuum of care on the campus — acute care in the hospital, outpatient care in hospital clinics, and follow-up visits to a physician's or specialist's office in the CSRC, ensuring patients get the right care in the right place, at the right time.
- A **NEW** sky-bridge connects to the hospital and its outpatient clinics allowing for convenient and efficient access for everyone.

Future developments

- The campus master plan includes other facilities that may be developed at a later date to support a growing demand for partners and services. These facilities are not part of the current New St. Paul's Hospital Project and could include a research innovation park and other amenities.
- A **NEW** Indigenous Wellness and Welcoming Centre will be developed on the south side of the campus.

"No other place in Canada has the same opportunity to match, in the foreseeable future, what we're planning at the new Jim Pattison Medical Campus. If you have anything to do with health care, medical research and innovation in BC this will be THE place to be."

Dr. Darryl Knight
 VP of Research and Academic Affairs for Providence Health Care
